## DETAILED ACTION

### *Application Status*

1. Claims 1-29 are pending in the instant application.

### *Restriction*

2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
  - I. Claims 1-22 and 26, drawn to *Flavobacterium heparinum* host cells, classified in class 435, subclass 252.3.
  - II. Claims 23-25, drawn to methods of making a polypeptide in *F. heparinum*, classified in class 435, subclass 69.1.
  - III. Claims 27-29, drawn to vectors for expression in *F. heparinum*, classified in class 435, subclass 320.1.
3. The inventions are distinct, each from the other because of the following reasons:

Groups I and III are related to Group II as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the host cells of Group I can be used for a materially different process of using that product, such as in the production of natively expressed heparinase from *F. heparinum*. Moreover, the vectors of Group III can be used for a materially different process of

Art Unit: 1652

using that product, such as in recombinant expression of proteins, whose expression is regulated by a *F. heparinum* promoter, in a different host cell, such as *E. coli*. Thus, Groups I and III are patentably distinct from Group II. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

The host cells of Group I and the vectors of Group III are related because the vectors are particularly designed for use in the host cells. However, the vectors can also be used with other host cells. Additionally, the vectors are wholly different products with different structure and with different function. Thus, Groups I and III are patentably distinct. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

### *Election*

4. A telephone call was made to Gretchen Rice on September 10 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 C.F.R. § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(i).

Art Unit: 1652

*Conclusion*

5. A complete response to the instant Office action must include an election of invention.
